Horn Care

The best way to care for horn is to keep it away from extremes of temperature and humidity. A quick wash and rinse using mild soap and water, followed by thorough hand drying is best. Never soak it, or place in a dishwasher.

For horn boxes, trays, spoons, salad servers and other utensils used for eating, rub over with a little almond oil or olive oil after cleaning. If this natural material used in combination with silver, clean the silver portion *after* applying the oil of choice, keeping silver polish away from the horn part. Given just a little routine care, horn will last for a lifetime — or several.
